

DCT-70

DIE CASTING TECHNOLOGY

DIE CASTING support in:

- part design,
- die design,
- process engineering

EXPERIENCE

KNOWLEDGE

PRECISION

CREATIVITY

About the company

Engineering company DCT-70 specializes in consulting the design of die casting dies for aluminium, magnesium and zinc alloys. The company is based on a rich 10-year experience in high pressure die casting and in the right direction of education. We offer our services worldwide, we support companies in English, Spanish and Polish.

The offer is dedicated to

- **Die Manufacturers/Die Designers**- in the area of: calculations and concept of the feeding system for new tools, verification of tool 3D model – very important, advice on changes in existing tools,
- **Foundries** - in the area of: new tool project leading and direct cooperation with the Toolroom, consulting in case of problems with the quality of the product / tool
- **Product Owners** - in the area of: optimizing part design, a new tool project leading and direct cooperation with the Toolroom, Foundry, consulting in case of problems with the quality of the product / tool

Low cost

Generally we do not use the casting simulation (if needed it can be ordered outside), our very effective advice is based on scientific calculations, our knowledge and experience. That is why we are fast and not expensive. During the process of part and die creating, there are many people who do not have enough time and knowledge to check and predict everything. Also with “simple” die, no one thinks about special consultancy because of its price and pressure of time – that is why there are so many wrong tools. We want to help you and we offer very good and effective support with really negligible cost comparing to a new tool.

Main customers

HILTI, VALEO, NOVEM, KOKI TECHNIK, TYRI, KITRON, SBS, SAGEM DEFENSE SECURITE, IKEA, SIEGENIA-AUBI, WINKHAUS, GLAMOX, SEM, WAYNE

We cooperate with many research institutes, foundries and toolrooms
